

## How to Measure Your Kitchen

The measurements we need, to give you an accurate estimate and layout are fairly simple. A few things to keep in mind are:

- Using this guide, give us a simple floor plan of your kitchen
- Measure in inches only
- Do not measure your cabinets, measure your walls as if the room were empty
- Measure any appliances that you are keeping and note their locations
- Note ceiling height and soffit height (if applicable)

A - Measure the size of the wall.

B - If there are any windows, measure from the left corner to the window molding.

C - Measure the window itself.

D - Measure from the window molding to the right corner.

Measurements "B" + "C" + "D" should equal "A".

Follow these steps in sequence around your room until you return to the starting point.
